Statement of Purpose

The purpose of the Installation Action Plan (IAP) is to outline the total multi-year Cleanup Program for an installation. The plan identifies environmental cleanup requirements at each site or area of concern, and proposes a comprehensive, installation-wide approach, with associated costs and schedules, to conduct investigations and necessary remedial actions (RAs).

In an effort to coordinate planning information between the restoration manager, US Army Environmental Center (USAEC), the 89th Regional Readiness Command (RRC), Installation Management Agency – Army Reserve Office (IMA-ARO), and the executing agencies, an IAP was completed. The IAP is used to track requirements, schedules and tentative budgets for all Army installation cleanup programs.

All site specific funding and schedule information has been prepared according to projected overall Army funding levels and is therefore subject to change. Under current funding projections, RAs were in-place at two Sites within the 89th RRC by the end of 2005 (Weldon Spring Training Area [WSTA] and Atchison Strategic Storage Facility [ASSF]), and long-term groundwater monitoring will be conducted. The Remedial Investigation (RI) at the third site, St. Louis Ordnance Plant (SLOP), will be taking place in 2006. RAs and long-term groundwater monitoring will take place at SLOP when the RI is completed.

The following agencies contributed to the formulation and completion of this 2006 IAP for the 89th RRC during a planning workshop held on 15 February 2006:

Installation Information

Installation Locale: Headquarters, 89th RRC is located at the Lanny J. Wallace US Army Reserve Training Center, 3130 George Washington Boulevard, Wichita, KS.

The 89th RRC has command and control of Army Reserve units and facilities in the four state area of Iowa, Kansas, Missouri, and Nebraska. The 89th RRC maintains real property ownership of all of the sites included in the IAP. The 89th RRC and tenant units, such as US Navy Reserve, US Marine Reserve, state National Guard, etc., use facilities for training, primarily on weekends. Full-time facility personnel are limited, typically consisting of one to five civilian and/or Active Guard/Reserve personnel per unit. Each unit stores a minimum of vehicles at its US Army Reserve (USAR) Center; most vehicles belonging to the units are maintained at Equipment Concentration Sites (ECS). vehicles maintained at the USAR Center, most units perform first echelon maintenance (e.g., fluid changes) at a collocated Organizational Maintenance Shop. Other mission equipment (e.g., tents, mission supplies, field support and service units) is maintained in caged storage areas within each USAR Center. Second echelon maintenance (e.g., parts replacement) occurs at the supporting Area Maintenance Support Activity (AMSA). Vehicles are transported to the AMSA by unit personnel and picked up following completion of repairs. The 89th RRC includes approximately 15,000 soldiers serving in approximately 96 facilities.

Installation Mission: Empower Soldiers, civilians, and families of the 89th RRC to exceed mission readiness standards and provide well-led, well-trained, and well-equipped Soldiers to increase the capability of our Nation's Joint Land Power Forces.

Lead Organization: IMA-ARO

Lead Executing Agency: Kansas City Corps of Engineers (COE)

Regulatory Participation:

Federal: US Environmental Protection Agency (USEPA), Region VII

State: Missouri Department of Natural Resources (MDNR)

Kansas Department of Health and Environment (KDHE)

Iowa Department of Natural Resources

Nebraska Department of Environmental Quality

National Priorities List (NPL) Status: Weldon Spring was listed on the NPL in February 1990. The Hazard Ranking Score is 58.6.

Installation Information

Dates for Construction Completion: Construction was completed in August, 2005. The preliminary closeout report (PCOR) completed by the USEPA, Region VII was signed in August, 2005.

Projected Date for NPL Removal: Final remedial action report on Operable Unit (OU)-2 (groundwater operable unit), Final Closeout Report, and Deletion of the Site from the NPL will be determined by the achievement of remedial goals for OU-2 (estimated to be 2165).

Installation Restoration Advisory Board (RAB)/Technical Review Committee/ Technical Assistance for Public Participation Status: The 89th RRC has requested that the RAB for the Weldon Spring remediation be discontinued after the August, 2005 meeting. Further information will be disseminated in public meetings as necessary.

Installation Program Summary IRP

Primary Contaminants of Concern: Explosives Residue, Heavy Metals

Affected Media of Concern: Soil, Groundwater

Estimated Date for Remedy-in-Place (RIP)/Response Complete (RC): 2007/2035

Funding to date (through FY05): \$1,264.8K

Current Year Funding (FY06): \$135K Cost-to-Complete (FY07+): \$2,188K

Cleanup Program Summary

Installation Historic Activity

The 89th RRC was created as a Division at Camp Funston, Fort Riley, on August 27, 1917. It was deployed to France in 1918 in support of World War I, where it gained campaign credits on the battlefields of Lorraine, St. Mahiel and Meuse Argonne. After the War, it was reactivated as part of the newly created Army Reserve in 1921. The 89th RRC found itself recalled to active service during World War II when it was called to Camp Carson, Colorado in 1942. During the war it was re-designated twice as the 89th Light Division and the 89th Infantry Division (1944). World War II campaign credits include Central Europe, Rhineland and the 3rd Army. In 1945, it was deactivated. Reactivation to active service occurred once again in 1947 with headquarters in Wichita, Kansas. In 1959, it was re-designated as the 89th Division (Training) and in 1973, it became the 89th United States Army Reserve Command (ARCOM). Over one third of the 89th ARCOM was activated during the Middle East crises (Operation Desert Shield/Desert Storm). From September 1990 through July 1991, 2500 activated 89er's set aside civilian life, parted from their families and left home to serve our nation. The 89th Army Reserve Command evolved into the 89th RRC in 1996.

IRP

Weldon Spring

Prior year progress: Record of Decision (ROD) signed for OU-2 (groundwater) at Weldon Spring on September 30, 2004. Remedial Design (RD)/RA Work Plan being revised as of March 2005. RD/RA was revised based upon negotiations with USEPA and MDNR. Modifications to the cost estimate were made to reflect land use control implementation.

Future Plan of Action: During FY07 long-term management (LTM) at Weldon Spring will continue.

SLOP

Prior Year progress: Technical Memorandum – Phase 1 RI, Former SLOP was completed by the Kansas City COE in May, 2005. This investigation filled in soil and groundwater contamination data gaps for the site. Kansas City COE performed additional groundwater sampling to delineate contaminated groundwater near in NE portion of the site. Study is ongoing and will be completed by the end of FY06.

Future Plan of Action: In FY07 the RI/FS or Engineer Evaluation/Cost Analysis (EE/CA) if deemed appropriate will be completed with an immediately subsequent RD/RA or Interim Remedial Action (IRA).

ASSF

Prior Year progress: At ASSF, the 89th RRC contracted with a vendor to sample the monitoring wells, track local rainfall events, and inspect the landfill cap. The Kansas City COE had previously contracted this work under the supervision of the 89th RRC.

Future Plan of Action: During FY07 ASSF long-term groundwater monitoring will continue with annual sampling of the six monitoring wells, rainfall event monitoring, and landfill cap inspection.

89TH REGIONAL READINESS COMMAND

Installation Restoration Program

Total Army Environmental Database-Restoration (AEDB-R) IRP Sites / AEDB-R sites with Response Complete: 401/398

Different Site Types:

- 5 Above Ground Storage Tanks
- 18 Contaminated Buildings
- 10 Contaminated Ground Water
- 1 Contaminated Sediments
- 1 Leach Field
- 33 Oil Water Separator
- 71 Other
- 182 Storage Area
- 12 Surface Disposal Area
- 1 Surface Runoff
- 61 Underground Storage Tank
- 1 Washrack
- 2 Waste Lines
- 3 Waste Treatment Plant

Most Widespread Contaminants of Concern: Explosives, Polychlorinated Biphenyls (PCBs), Metals, Solvents

Media of Concern: Groundwater, Sediment, Soil

Completed Removal/IRA/RA:

2005 - Weldon Spring - LTM - \$92K

Total IRP Funding

Prior years (up to FY05): \$1,264.8K Current year funding (FY06): \$ 135.0K Future Requirements (FY07+): \$2,188.0K Total: \$3,587.8K

Duration of IRP

Year of IRP Inception: 1998 Year of IRP RIP/RC: 2007/2035

Year of IRP Completion including LTM: 2035

IRP Contamination Assessment

IRP Contamination Assessment Overview

The IRP began in 1989 at the SLOP when the property belonged to Fort Leonard Wood. A Preliminary Assessment (PA) was conducted. The property was transferred to the 89th RRC in 1997. The IRP for the 89th RRC was established in 1998 because of the potential for contaminated sites within the 89th RRC. The potential contaminants of concern at the SLOP site include PCBs, solvents and heavy metals.

The SLOP was placed on the Federal Facilities Hazardous Waste Docket in November 1998. The 89th RRC is responsible for only a portion (11.4 acres) of the entire SLOP facility.

An area of contaminated groundwater at the northeast end of the site may extend off-site. The extent and degree of groundwater contamination in this area has yet to be determined.

IRP Cleanup Exit Strategy

The OU-2 ROD (groundwater) for Weldon Spring requires Monitored Natural Attenuation (MNA) until remedial goals have been met (estimated to be 2165).

A Decision Document (DD) was received in 1999 for the ASSF to conduct LTM which will continue through 2029.

Excavation and disposal of contaminated soils at SLOP should be completed by the end of 2007. MNA of groundwater may be required through 2009 and possibly longer.

89TH REGIONAL READINESS COMMAND

Installation Restoration Program
Site Descriptions

SLOP-01 MAGAZINE SERIES 228 ST. LOUIS ORDNANCE PLANT

SITE DESCRIPTION

This site, 11.4 acres, is a portion of the SLOP facility. The facility was used for manufacturing and storage of powder for the production of ammunition between 1941 and 1945. This operation was discontinued in 1969. Prior studies have revealed explosive related compounds and heavy metals in the shallow soils. Explosive compounds are below action levels.

In addition, PCB contaminated soils were partially removed in1992. Additional PCB contaminated soil has been discovered and currently being evaluated to determine if further action is necessary.

In FY05 the Kansas City COE did additional groundwater sampling to delineate a plume in the NE corner of the property. This study is ongoing and will be completed by the end of FY2006. Currently, additional investigation is being conducted to determine the nature and

extent of groundwater and soil contamination. Preliminary data indicates the presence of solvents in groundwater near Bldg. 220 at the northern end of the site.

CLEANUP STRATEGY

RI/FS or EE/CA, if deemed appropriate, will be completed with a RD/RA (~1000 cubic yards soil removal) to follow.

WSTA-001 FORMER TNT/DNT PRODUCTION AREA WELDON SPRING (PAGE 1 OF 2)

SITE DESCRIPTION

Weldon Spring Ordnance Works (WSOW) is a 17,000-acre former TNT/DNT manufacturing plant. After excessing most of the site, the Army retained the contaminated production area, approx 1700 acres, which now makes up the WSTA. Fort Leonard Wood previously was responsible for this facility. The area is used primarily as a training site for Army Reserve and Missouri National Guard units. In February 1990, WSTA was part of the Weldon Spring Former Army Ordnance Works placed on the USEPA NPL of uncontrolled Hazardous Waste Sites. The Army owns the WSTA and the US Department of Energy, Missouri Department of Conservation, Francis Howell School District and others now own other portions of the WSOW site. The remediation of WSOW: including WSTA, is governed by the Federal Facilities Agreement (FFA), Docket Number VII-90-F-0033 between the USEPA Region 7, the MDNR, and the US Department of the Army (the original FFA was with Fort Leonard Wood, but has since transferred to the 89th RRC).

The WSOW NPL site has been divided into two OUs, on separate schedules, permitting an accelerated cleanup of the soils. OU-1 includes the soils and wooden pipeline impacted during explosives production, and OU-2 includes the contaminated groundwater at the site. The OU-1 ROD was signed in 1996 with an Explanation of Significant Differences signed in 2004. Approximately 120,000 tons of contaminated material was addressed under OU-1. The contaminants of concern were PCBs, Trinitrotoluene (TNT), Dinitrotoluene (DNT), lead and Polycyclic Aromatic Hydrocarbons. RAs for OU-1 were submitted to the USEPA in July 2004. The site has been returned to unrestricted use with the exception of a small area (less than one acre controlled by Institutional Controls).

The ROD for OU-2 was signed on September, 2004. The selected remedy for OU-2 is MNA. The primary contaminants of concern in the groundwater are 2,4- DNT; 1,3-DNB; NB; 2,6-DNT; 2,4,6-TNT; o-NT; m-NT, and p-NT. As part of the OU-2 RI activities, an

WSTA-001 FORMER TNT/DNT PRODUCTION AREA WELDON SPRING (PAGE 2 OF 2)

extensive groundwater monitoring program was instituted at WSOW. Based on groundwater data collected from October 2001 to August 2004, it was determined that groundwater contamination at WSOW did not pose a threat to human health from recreational exposures nor potentially significant ecological risk. Some areas on the WSOW were identified as having contaminant concentrations that exceeded Federal and/or state levels for groundwater and/or surface water with regards to ingestion. It is anticipated that natural attenuation of the groundwater will achieve remedial goals in 2165. Institutional Controls will remain in place to control groundwater and surface water contamination until the site is removed from the NPL.

CLEANUP STRATEGY

Continue MNA and five year reviews.

Atchison Strategic Storage Facility

SITE DESCRIPTION

A closed and capped Landfill/CD site is located at the ASSF three miles south of Atchison. Kansas. This landfill is approximately three acres in size and is associated with defense activities from 1952-1972. Through an agreement with the KDHE, groundwater monitoring is being conducted at the site for 30 years. Monitoring was conducted quarterly in the first year, semi-annually in the second year, and annually thereafter. Solvents were identified in concentrations above cleanup and Safe Drinking Water Standards in groundwater. Concentrations of the metals cadmium, chromium, lead and nickel have been reported above maximum contaminant levels in groundwater samples.

Initiation of IRP: 1998

Past Phase Completion Milestones

1979

• IRA completion at SLOP-01 (Aug)

1981

PA completion at SLOP-01 (June)

1988

PA and SI completion at WSTA-001 (February & April, respectively)

1998

SI completion at SLOP-01 (August)

1999

PA completion at Site 1 (July)

2000

• SI, IRA, and RC completion at Site 1 (August)

2004

- WSTA-001, ROD OU-2 signed in September
- RI/FS completion at WSTA-001 (October)

2005

- WSTA-001, USEPA signed PCOR in August
- RD completion at WSTA-001 (June)
- RA(C) and RC completion at WSTA-001 (September)

Projected ROD/DD Approval Dates: 2007 SLOP-01

Construction Completion Date of IRP: 2005

Projected Date for Removal from NPL: 2035

Schedule for Next Five-Year Review: 2011

Estimated Completion Date of IRP (including LTM phase): 2035

89th RRC IRP Schedule

Community Involvement

The 89th RRC has requested that the RAB for the Weldon Spring remediation be discontinued after the August, 2005 meeting. Further information will be disseminated in public meetings as necessary.

Community interest will be pursued at the SLOP site.
